David Pearce : Blueprint 2: Greening the World Economy: Greening the World Economy v. 2 (Blueprint Series) before purchasing it in order to gage whether or not it would be worth my time, and all praised Blueprint 2: Greening the World Economy: Greening the World Economy v. 2 (Blueprint Series):

Following 'Blueprint for a Green Economy' (the Pearce Report), David Pearce and his team have turned their attention to global environmental threats. If it makes sense to apply economic analysis to national environmental problems, then it makes even more sense to apply it to world-wide dangers. The authors start by describing the reasons for using economic approaches to common resources like climate, ozone and biodiversity. They then take a detailed look at the economic ways of tackling the issues involved in global warming, ozone layer depletion, environmental degradation in the Third World, population, rain forests, aid, equity, international environmental co-operation and what might amount to green foreign policies. They show not only how to take all these things into account in economic theory, but also the economic price of failing to do so. Blueprint 2 is an agenda for international and governmental economic action.

"admirably clear-headed in an area where muddle is often king ...an excellent introduction to the most pressing environmental issues" -- Financial Times
About the Author David Pearce is co-author of *Blueprint for a Green Economy and Sustainable Development*.
