Heiko Meyer, Franz Fuchs, Klaus Thiel : Manufacturing Execution Systems (MES): Optimal Design, Planning, and Deployment before purchasing it in order to gage whether or not it would be worth my time, and all praised Manufacturing Execution Systems (MES): Optimal Design, Planning, and Deployment:

7 of 7 people found the following review helpful. Excellent MES reference
By Daniel Cox
This book is a comprehensible guide for MES. It offers a good overview of the current state of production needs regarding a Manufacturing Execution System and the already available concepts. General information is provided and different tools are compared. Also the question is asked, whether and when the implementation of an MES makes sense and how the implementation can be accomplished. The authors not only summarized their own thoughts about and experiences with MES but also made a whole lot of research. Thus, the book provides information about different MES and similar tools and considers different point of views. The content is held neutral and doesn't promote one certain tool, as is often the case in other books (and this even though two of the authors are working for an MES provider). Altogether the book is, though full of technical data and details, written in a very comprehensible way. Many process charts further deepen the understanding, and also does the large glossary. It will be a valuable reading for providers as well as users of an MES and also provides a good overview of the state of the art for anyone who is interested in this topic. This book is a serious specialist publication that is still comfortably to read.
1 of 10 people found the following review helpful. Good book
By Nacho bizness
Good book for me to read. I like read book. I read many book and this book reads good as others.

New global standards are the basis for new MES products that have appeared in the last five years in the marketplace

About the Author
Heiko Meyer is a professor at the University of Applied Science in Munich. He also collaborates with Gefasoft Inc., in the creation of MES software.
