Andrew Scott Johnston : Mercury and the Making of California: Mining, Landscape, and Race, 1840ndash;1890 (Mining the American West) before purchasing it in order to gage whether or not it would be worth my time, and all praised Mercury and the Making of California: Mining, Landscape, and Race, 1840ndash;1890 (Mining the American West):

Mercury and the Making of California, Andrew Johnston's multidisciplinary examination of the history and cultural landscapes of California's mercury-mining industry, raises mercury to its rightful place alongside gold and silver in the development of the American West.

"An outstanding contribution to our understanding of the history of the mercury industry in California and how it changed the development of California and the American West." —Donald L. Hardesty, Professor Emeritus of Anthropology, University of Nevada, Reno "This will likely remain the definitive business analysis and social history of California mercury mining for years to come." —Timothy LeCain, *The Journal of American History* "A wonderfully eclectic book. . . . Johnston's larger point is well made and indisputable and suggests, as many of the best new mining history studies have done, that we live today in a culture and society shaped by the way we mine our metals and the metals that we mine." —Kent A. Curtis, *Western Historical Quarterly* "[Andrew Scott Johnston's] essential and fascinating study of the temporal, spatial, and economic impact of mercury mining on California and the world fills an open pit-scale omission in the history of a state where gold has always enjoyed star billing. . . . Johnston's close study of the industry does much to restore mercury to the crucial role it once played in the world and California's economy and to the shaping of its landscape." —Gray Brechin, *Journal of Historical Geography*
