M. Larsson : The Business of Global Energy Transformation: Saving Billions through Sustainable Models before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Business of Global Energy Transformation: Saving Billions through Sustainable Models:

One of the first books to analyze business and financial aspects of sustainable transport and fuels systems and provides novel insights for researchers, managers, and politicians who work in energy and sustainability related areas.

"Mats Larsson has written an important book with wide scope and a precise message we must organise for a potentially dire future. It is a future without enough energy if we continue to pretend it is OK to do 'business as usual'. His important insight is that we, globally, must develop new organisational capacities to manage massive change if we are to survive. A must read!" -John Kidd, Research Fellow, Aston Business School
About the Author
MATS R. LARSSON has worked for 20 years as a business consultant and is also the founder of the Global Energy Transformation Institute. He is an expert in business strategy, innovations and entrepreneurship, and has worked extensively both with large companies and individual entrepreneurs in several technology and business areas. In the past six years he has worked with large scale energy systems transformation.
