Gene Kim, Jez Humble, Patrick Debois, John Willis : The DevOps Handbook: How to Create World-Class Agility, Reliability, and Security in Technology Organizations before purchasing it in order to gage whether or not it would be worth my time, and all praised The DevOps Handbook: How to Create World-Class Agility, Reliability, and Security in Technology Organizations:

0 of 0 people found the following review helpful. Best in class DevOps book so far
By Paul
You can't be into DevOps and not read this book. Covers culture, practices, value stream mapping, metrics, case studies, GRC, and security just to name those that come to mind now. My Kindle edition bookmarks and notes could make for a separate book on its own because there's that much in the book worth noting.

By Kai Ajala Dupe
This is an excellent book on DevOps.

Increase profitability, elevate work culture, and exceed productivity goals through DevOps practices. More than ever, the effective management of technology is critical for business competitiveness. For decades, technology leaders have struggled to balance agility, reliability, and security. The consequences of failure have never been greater whether it's the healthcare.gov debacle, cardholder data breaches, or missing the boat with Big Data in the cloud. And yet, high performers using DevOps principles, such as Google, Amazon, Facebook, Etsy, and Netflix, are routinely and reliably deploying code into production hundreds, or even thousands, of times per day. Following in the footsteps of The Phoenix Project, The DevOps Handbook shows leaders how to replicate these incredible outcomes, by showing how to integrate Product Management, Development, QA, IT Operations, and Information Security to elevate your company and win in the marketplace.

About the Author
Gene Kim is a multiple award-winning entrepreneur, the founder and former CTO of Tripwire and a researcher. He is passionate about IT operations, security and compliance, and how IT organizations successfully transform from "good to great." He lives in Portland, Oregon.
Jez
Humble
is an award-winning author and researcher on software who has spent his career tinkering with code, infrastructure, and product development in organizations of varying sizes across three continents. He works at 18F, teaches at UC Berkeley, and is co-founder of DevOps Research and Assessment LLC.
Patrick Debois is an independent IT-consultant who is bridging the gap between projects and operations by using Agile techniques both in development, project management and system administration.
John
Willis
has worked in the IT management industry for more than 30 years. He has authored six IBM Redbooks for IBM on enterprise systems management and was the founder and chief architect at Chain Bridge Systems. He lives in Atlanta, Georgia.
John Allspaw has worked in systems operations for over fourteen years in biotech, government and online media. He started out tuning parallel clusters running vehicle crash simulations for the U.S. government, and then moved on to the Internet in 1997. He built the backing infrastructures at Salon.com, InfoWorld.com, Friendster, and Flickr. He is now VP of Tech Operations at Etsy, and is the author of "The Art of Capacity Planning" and "Web Operations" published by O'Reilly.
