From Routledge : The Economics of Green Growth: New indicators for sustainable societies (Routledge Studies in Ecological Economics) before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Economics of Green Growth: New indicators for sustainable societies (Routledge Studies in Ecological Economics):

The Economics of Green Growth investigates the possibility of creating an integrated indicator covering three pillars of sustainable development: economy, society and the environment. The excessive pursuit of economic efficiency has resulted in severe environmental problems such as climate change and biodiversity loss, and societal human issues such as inequality and disparity. The book aims to change the direction of economic growth towards one which is more sustainable. It explores beyond the conventional indicator, the GDP that measures economic growth and human well-being. It also introduces new indicators relevant to sustainable development and a green economy and discusses the key issues for these indicators.

About the Author Shunsuke Managi is Professor of Technology and Policy, School of Engineering at Kyushu University, Japan, while also holding position as IGES fellow at Institute for Global Environmental Strategies and an Adjunct Professor at the University of Tokyo. He is an editor of Environmental Economic and Policy Studies, a lead author for the Intergovernmental Panel on Climate Change, and is the author of "Technology, Natural Resources and Economic Growth: Improving the Environment for a Greener Future" and editor of "The Routledge Handbook of Environmental Economics in Asia".
