Yoram Koren : The Global Manufacturing Revolution: Product-Process-Business Integration and Reconfigurable Systems (Wiley Series in Systems Engineering and Management) before purchasing it in order to gage whether or not it would be worth my time, and all praised The Global Manufacturing Revolution: Product-Process-Business Integration and Reconfigurable Systems (Wiley Series in Systems Engineering and Management):

4 of 4 people found the following review helpful. Excellent book about global manufacturing in 21st century
By Hui Wang
It is an excellent book about global manufacturing. Very insightful and useful. It talks about what manufacturing enterprises should do in order to succeed in the 21st Century. It also discusses how manufacturing enterprises should deploy globalization strategies that include issues such as fitting the product to the region where it intends to be sold, selecting the best manufacturing configurations to enhance productivity, and optimizing the location of factories. It includes the following topics: Globalization and Manufacturing Paradigms, Product Invention Strategy, Customized, Personalized, Reconfigurable Products, Mass Production Models, Analysis of Mass Customization, Traditional Manufacturing Systems, Economics of Manufacturing Systems, Reconfigurable Manufacturing Systems and System Configuration Analysis, Responsive Business Models for Global Manufacturing, Enterprises Enterprise Globalization Strategies, Where Are Manufacturing Enterprises Headed?
This book also includes many numerical examples as well as the homework assignments. At the end of the book, there is detailed course project description and requirement, which can be used as the guideline for the course project. We use it as the textbook for Global Manufacturing course at University of Michigan for the past several years and receive a lot of good feedback from students.

The book is just as described and delivered very fast.

The concrete tools manufacturing enterprises need to thrive in today's global environment
For a manufacturing enterprise to succeed in this current volatile economic environment, a revolution is needed in restructuring its three main components: product design, manufacturing, and business model. The *Global Manufacturing Revolution* is the first book to focus on these issues. Based on the author's long-standing course work at the University of Michigan, this unique volume proposes new technologies and new business strategies that can increase an enterprise's speed of responsiveness to volatile markets, as well as enhance the integration of its own engineering and business. Introduced here are innovations to the entire manufacturing culture: An original approach to the analysis of manufacturing paradigms Suggested methods for developing creativity in product design A quantitative analysis of manufacturing system configurations A new manufacturing "reconfigurable" paradigm, in which the speed of responsiveness is the prime business goal An original approach to using information technology for workforce empowerment The book also offers analysis and original models of previous manufacturing paradigms' technical and business dimensions—including mass production and mass customization—in order to fully explain the current revolution in global manufacturing enterprises. In addition, 200 original illustrations and pictures help to clarify the topics. Globalization is creating both opportunities and challenges for companies that manufacture durable goods. The tools, theories, and case studies in this volume will be invaluable to engineers pursuing leadership careers in the manufacturing industry, as well as to leaders of global enterprises and business students who are motivated to lead manufacturing enterprises and ensure their growth.

"This edition contains new data and examples, plus bw drawings. The book can be used as a text for a class in global manufacturing for graduate engineering and business students; it will also be helpful for engineers pursuing managerial careers in manufacturing, and for leaders of global enterprises." (Book News Inc, November 2010)
About the Author
Yoram Koren is a member of the National Academy of Engineering and the Paul G. Goebel Professor of Engineering in the Department of Mechanical Engineering at the University of Michigan, as well as the Director of the NSF Engineering Research Center for Reconfigurable Manufacturing Systems. He has won many awards, including, most recently, the Stephen S. Attwood Award from the University of Michigan College of Engineering, 2008, and the Gold Medal from the Society of Manufacturing Engineers, 2007.
